

Illustrative cross-table setting

Source schema (A)

Age_code	Smoke_code	SBP
----------	------------	-----

semantic alignment across schemas

Target schema (B)

Age	Smoker	Systolic BP
-----	--------	-------------

Intended model input

Age = 63 | Smoker = 1 | SBP = 135

↓ remove feature names

Candidate comparison input

63 | 1 | 135

Feature-name semantics removed; Input format also changed (name=value → values only)

Does not isolate the tested component

Intended model input

Age = 63 | Smoker = 1 | SBP = 135

↓ anonymize feature names

Candidate comparison input

x1 = 63 | x2 = 1 | x3 = 135

Feature-name semantics removed; Input format preserved (name=value)

Can isolate the tested component, if the remaining setup is unchanged
